New Rules

Elica's new Rules vertical cooker hood has been created for maximum design versatility. Its front can be adjusted on installation from 21cm to 36cm deep so that it can be flush with cabinets. It is also available in black glass or Dekton, or can alternatively be customised to exactly match the surrounding kitchen furniture.

Smooth Operator

Westin's Status Mono ceiling hood uses the natural path of the air to guide it diagonally in a gentle curve into the hood along its smooth glass panel to the central extraction area. By reducing turbulence and air noise in this way, its design also ensures that the size and power requirement of the hood can be kept to a minimum. The remote-controlled unit also features slimline LED lighting.
