Made to Measure

Designer Tristan Auer on the vital importance of bespoke

Scudo, owned by **Harrison Bathrooms** (stand E54) is a family-run business dating back over 100 years. The brand launched its new Edition 18 collection in the New Year and kbb Birmingham will be the first opportunity to showcase this. Hero products on display include the new KOKO opulent brassware and BOHO freestanding furniture which features a matt black frame and rustic oak accents.

InSinkErator (stand J84) will be introducing its Next Generation food waste disposers at kbb. Over 90 years on since their invention in 1927 by InSinkErator founder John W. Hammes, the Next Generation is the very latest incarnation which harnesses new technology to help provide a convenient, clean solution for managing food waste.

Now in its tenth year, the **Innovation Awards**, in partnership with Blum, will be back to highlight the most creative and ground-breaking solutions from brands in the sector. Areas of recognition include new methods and ideas or products that demonstrate innovation. The shortlist comprises a wide-ranging line-up of clever creations from across the kitchen and bathroom sector, all of which will be on display at the show. Pictured is Elica's LHOV 3-in-1 appliance.

Westin (stand N84) will be launching a number of new products including the restyled Stratus Compact ceiling hood. The British manufacturer will also be displaying handcrafted, British made hoods from The Collection, and ultra-high-performance hoods from the professional range, as well as unique bespoke examples. In addition, as the sole UK distributor, Westin will also be presenting examples of the Sirius range of hoods, a long-established Italian brand with distinct styling and high-end quality, at a mid-range price point. The Sirius hoods displayed will include models with the innovative anti-condensation technology.
